Beginner   Developer   Solution Architect   Student   Azure   Blockchain Service

Blockchain Workbench

Discover how blockchain protocols enable trust. Learn to assess scenarios for when to use blockchain and decide if it's right for your solution.

Learning objectives

In this module, you will learn to:

- Explain how blockchain enables trust and business processes between participants
- Evaluate when to use blockchain for a solution
- Classify available blockchain options on Azure

Start >   ⊕ Save

Prerequisites

- Basic knowledge of programming concepts such as variables and conditional logic

This module is part of these learning paths
